<b>Office Action Summary</b>	<b>Application No.</b>	<b>Applicant(s)</b>	
	10/774,709	KAWASHIMA ET AL.	
	<b>Examiner</b>	<b>Art Unit</b>	
	Lawrence D. Ferguson	1774	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --  
**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**Status**

- 1) ☒ Responsive to communication(s) filed on 19 October 2006.
- 2a) ☒ This action is **FINAL**.                      2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

**Disposition of Claims**

- 4) ☒ Claim(s) 1-16 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1, 4 and 7-16 is/are rejected.
- 7) ☒ Claim(s) 2, 3, 5 and 6 is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

**Application Papers**

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

**Priority under 35 U.S.C. § 119**

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All    b) ☐ Some \*    c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- \* See the attached detailed Office action for a list of the certified copies not received.

## DETAILED ACTION

### *Response to Amendment*

1. This action is in response to the amendment mailed October 19, 2006.

Claims 1-3 and 5-6 was amended rendering claims 1-16 pending.

### *Objections*

2. Claim 3 is objected to due to the phrase, "laminated structure comprising the the water repellent layer." Examiner suggests deleting the word --the--. Correction is requested.

### *Claim Rejections – 35 USC § 103(a)*

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1, 4, 7-12 and 14-16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Petrmichl et al. (U.S. 5,888,593).

Petrmichl discloses a barrier film comprising at least two silicon oxide carbide layers (dense and water repellent layers) (column 5, lines 26-35 and column 13, lines 24-44) having abrasion resistant coating on the substrate (column 4, lines 59-64) where the protective coating provides a barrier to moisture, oxygen and other environmental

Art Unit: 1774

elements, which utilizes plasma treatment process (column 3, lines 25-32). The coatings may be composed of multiple layers including a thin adhesion layer (column 5, lines 66-67). Petrmichl further discloses the barrier film can be used for scanner windows and industrial wear parts (an image display medium or container). Because Petrmichl has a barrier film with equivalent materials as the claimed invention, it would have been obvious to one of ordinary skill in the art to include the optimum thickness of the barrier layers and substrate and the atomic percentage of Si, O and C of the barrier layer(s). Such features are properties which can be easily determined by one of ordinary skill in the art. With regard to the limitation of the thickness and atomic percentage, absent a showing of unexpected results, it is obvious to modify the conditions of a composition because they are merely the result of routine experimentation. The experimental modification of prior art in order to optimize operation conditions (e.g. thickness and atomic percentage) fails to render claims patentable in the absence of unexpected results. All of the aforementioned limitations are optimizable as they directly affect the durability of the film. It would have been obvious to one of ordinary skill in the art to make the barrier film with the limitations of the thickness and atomic percentage since it has been held that discovering an optimum value of a result effective variable involves only routine skill in the art. *In re Boesch*, 617 USPQ 215 (CCPA 1980). In claims 10 and 15, the phrases, "plastic treatment process is applied to the uppermost surface of the barrier layer" and "produced by thermally fusing the heat sealable resin layer into a bag or box" respectively, introduces process limitations to the product claims. The patentability of a

Art Unit: 1774

product does not depend on its method of production. If the product in the product-by-process claim is the same as or obvious from a product of the prior art, the claim is unpatentable even though the prior product was made by a different process." In re Thorpe, 777 F.2d 695, 698, 227 USPQ 964, 966. Further, process limitations are given no patentable weight in product claims. In claim 14, the phrase, "heat sealable" constitutes a 'capable of' limitation and that such a recitation that an element is 'capable of' performing a function is not a positive limitation but only requires the ability to so perform.

***Claim Rejections – 35 USC § 103(a)***

5. Claims 13 is rejected under 35 U.S.C. 103(a) as being unpatentable over Petrmichl et al. (U.S. 5,888,593) in view of Thomas et al (WO 93/24243).

Petrmichl is relied upon for instant claim 1. Petrmichl does not explicitly disclose the oxygen transmission rate or water vapor transmission rate. Thomas teaches a gas barrier film (abstract) having a silicon oxide film formed by a plasma method (page 4, lines 10-37, page 14, lines 7-20 and page 20, lines 1-10), wherein oxygen transmission rate is 0.4 cc/m<sup>2</sup>/day or less and water vapor transmission rate is 0.4 cc/m<sup>2</sup>/day or less (page 19, lines 1-13), wherein a heat sealable resin layer is provided on the surface of at least one side of the gas barrier film (page 20, lines 11-34, since polyethylene terephthalate, polypropylene, polyethylene and polyvinylchloride are heat sealable resins (page 20, lines 1-34). Petrmichl and Thomas are both directed to barrier films. Therefore, it would have been obvious to one of ordinary skill in the art for the OTR and

Art Unit: 1774

WVTR to have a transmission rate of 0.4 cc/m<sup>2</sup>/day or less, as taught in Thomas for the barrier layer of Petrmichl's transmission rate for an improved permeation of carbon dioxide (page 19, lines 1-10).

6. Claims 2-3 and 5-6 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. The prior art of record does not teach or suggest the recited barrier film further including wherein the barrier layer has a laminated structure comprising a water repellent layer sandwiched between two dense layers. The prior art of record also does not teach or suggest the recited barrier film further including wherein the barrier layer has a laminated structure comprising the dense layer sandwiched between two water repellent layers. The prior art does not teach motivation or suggestion for modification to make the invention as instantly claimed.

### ***Response to Arguments***

7. The objection of the abstract is withdrawn due to Applicant amending the abstract.

Rejection made under 35 U.S.C. 112, second paragraph, is withdrawn due to Applicant amending claims 2-3 and 5-6.

Applicant's remarks to rejection made under 35 U.S.C. 103(a) as being unpatentable over Petrmichl et al. (U.S. 5,888,593) has been considered but is

Art Unit: 1774

unpersuasive. In response to applicant's argument that the references fail to show certain features of applicant's invention, it is noted that the features upon which applicant relies (i.e., the cited references do not suggest, teach or remotely disclose the coating being folded or rolled up) are not recited in the rejected claim(s). Additionally the features upon which applicant also relies (i.e., high barrier properties and high flexibility) are not recited in the rejected claim(s). Although the claims are interpreted in light of the specification, limitations from the specification are not read into the claims. See *In re Van Geuns*, 988 F.2d 1181, 26 USPQ2d 1057 (Fed. Cir. 1993). Regarding the base material film having a thickness in a range of  $5\mu\text{m}$  to  $500\mu\text{m}$ , because Petrmichl has a barrier film with equivalent materials as the claimed invention, it would have been obvious to one of ordinary skill in the art to include the optimum thickness of the substrate. Such features are properties which can be easily determined by one of ordinary skill in the art. It would have been obvious to one of ordinary skill in the art to make the barrier film substrate with the limitations of the thickness since it has been held that discovering an optimum value of a result effective variable involves only routine skill in the art. *In re Boesch*, 617 USPQ 215 (CCPA 1980).

8. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

### ***Conclusion***

9. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Lawrence Ferguson whose telephone number is 571-272-1522. The examiner can normally be reached on Monday through Friday 9:00 AM – 5:30PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Rena Dye, can be reached on 571-272-3186. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should
